Journal of Research of the

National Institute of Standards and Technology

The National Institute of Standards and Technology was established in 1988 by Congress to “assist industry in the development of technology . . . needed to improve product quality, to modernize manufacturing processes, to ensure product reliability . . . and to facilitate rapid commercialization . . . of products based on new scientific discoveries.”

NIST, originally founded as the National Bureau of Standards in 1901, works to strengthen U.S. industry’s competitiveness; advance science and engineering; and improve public health, safety, and the environment. One of the agency’s basic functions is to develop, maintain, and retain custody of the national standards of measurement, and provide the means and methods for comparing standards used in science, engineering, manufacturing, commerce, industry, and education with the standards adopted or recognized by the Federal Government.

As an agency of the U.S. Commerce Department’s Technology Administration, NIST conducts basic and applied research in the physical sciences and engineering, and develops measurement techniques, test methods, standards, and related services. The Institute does generic and precompetitive work on new and advanced technologies. NIST’s research facilities are located at Gaithersburg, MD 20899, and at Boulder, CO 80303. For more information contact the Public Inquiries Desk, 301-975-3058.

Board of Editors

Barry N. Taylor
Chief Editor

Nancy M. Trahey, Technology Services

Richard J. Van Brunt, Electronics and Electrical Engineering Laboratory

Theodore V. Vorburger, Manufacturing Engineering Laboratory

John R. Moody, Chemical Science and Technology Laboratory

Ronald Collé, Physics Laboratory

Kenneth L. Jewett, Materials Science and Engineering Laboratory

Piotr A. Domanski, Building and Fire Research Laboratory

Alan H. Goldfine, Computer Systems Laboratory

Daniel W. Lozier, Computing and Applied Mathematics Laboratory

Matt Young, Boulder Laboratories

Chris E. Kuyatt, Washington Editorial Review Board

Donald R. Harris
Managing Editor

Julian M. Ives
Technical Production Editor

U.S. Department of Commerce—**Michael Kantor**, Secretary
Technology Administration—**Mary L. Good**, Under Secretary for Technology
National Institute of Standards and Technology—**Arati Prabhakar**, Director

The Journal of Research of the National Institute of Standards and Technology features advances in measurement methodology and analyses consistent with the NIST responsibility as the nation's measurement science laboratory. It includes reports on instrumentation for making accurate and precise measurements in fields of physical science and engineering, as well as the mathematical models of phenomena which enable the predictive determination of information in regions where measurements may be absent. Papers on critical data, calibration techniques, quality assurance programs, and well-characterized reference materials reflect NIST programs in these areas. Special issues of the Journal are devoted to invited papers in a particular field of measurement science. Occasional survey articles and conference reports appear on topics related to the Institute's technical and scientific programs.

News Briefs

GENERAL DEVELOPMENTS	821
Implementation of the Accreditation Body Evaluation Program (ABEP)	
U.S.-China Workshop on Conformity Assessment	
Energy-Related Inventions Program Makes Recommendations	
USTTI-NIST Workshop on Standards and Conformity Assessment for Telecommunications	

New Method for Characterizing Uniformity of LiNbO ₃ Offers Order-of-Magnitude Improvement in Sensitivity	822
NIST Provides Calibration Measurements of New NASA Reverberation Chamber Test Laboratory	
NIST Demonstrates Noise Figure Measurements for Low-Noise Amplifiers	823
NIST Researcher Chairs Flat-Panel Display Measurements Standards Group	
NIST Completes Diamond Turning Project With Penn State Researchers	
Electrochemically Driven Biotransformation	824
NIST Realizes ITS-90 From 0.65 K to 5 K With Unprecedented Accuracy	
New Analytical Chemistry Measurement Capabilities Afforded by Cold Neutron Research Facility Upgrade	
New Theory for Small Metal Clusters	825
Chemistry of the Cosmos	
High-Accuracy Scale for Absolute Spectral Response	826
Fifth SIRREX Held at NIST	
New Observation of Spectrum of Iron Ion	
Papers on Trapped Ions and Laser Cooling Published	
Computer Time Services Expand	827
NIST Consortium Formed to Develop Measurement Methods for Orthopedic Devices	
First Direct Observation of Fixed Electro-Optic Gratings in Photorefractive Materials	
International Conference Highlights Progress in Nanostructured Materials	828
Neutron Scattering Meetings Held at NIST	
NIST to Work with Auto Manufacturer on Safer Cars	
NIST Predicts Carbon Monoxide Production in Fires	829
Economic Methods Help Bridge the Gap in Use of New-Technology Construction Materials	
NIST Initiates Partnerships With Industry to Develop Elements of a Public Key Infrastructure (PKI)	
NIST Staff Participate in Workshop on Statistics in Metrology in Mexico	
New Publication Describes Evaluation Experiment of Trusted Mach (TMach) System	830
Fuels Law Changes to Protect Consumers	
Update of Popular Mass Spectral Database Available	
“Sounding Out” Improved Materials	
Two Manufacturers, Two Service Firms Win Baldrige	
Baldrige Awardees Discuss Winning Ways at QE IX	831
